II.1.4) Short description

The University of York has a diverse plant biology research portfolio covering fundamental mechanistic work to applied plant breeding and near-field research. We have world-leading capabilities in exploiting novel agricultural products such as biopharmaceuticals, enzymes and other high-value chemicals from plants. Our work utilises a broad range of plant species, including global agricultural crops such as rice, oil-seed rape and cereal crops as well novel biopharmaceutical crops such as Poppy and Artemisia. Much of our fundamental plant science utilises the model plants *Arabidopsis thaliana*, *Nicotiana benthamiana* and *Brachypodium distachyon*. This portfolio of research is dependent on a range of controlled environment growing facilities including 8 controlled temperature rooms, 36 reach-in controlled environment (CE) chambers and 5 glasshouses. We are seeking to expand our range of reach-in controlled environment chambers, replacing end-of-service units with modern, energy efficient
