Description

The equipment is a stack of high-speed emissions gas analysers. The flame ionisation detector (FID) for hydrocarbons, chemiluminescence detector (CLD) for NO,NO₂, and non-dispersive infrared (NDIR) and CO CO₂ have a fast (sub 20 millisecond) response time and are combined in a single heated manifold with calibrated cross interferences for combustion applications meeting industry certified standards. The fast response rate enables area resolved fast traverses in high temperature short time scale combustion facilities, and time resolved measurement of combustion transients, essential for technology development related to future defence platforms.
