II.2.4) Description of the procurement

As the diversion of LLW from LLWR Repository has become business as usual over the past 10 years and decommissioning programmes at customer sites have matured; the types of waste being managed through NWS frameworks has changed. NWS are seeing an increase in the number of challenging / problematic waste streams which require broader waste acceptance criteria and/or a range of specialist waste management advice/support. Customers often also require support higher up in the waste lifecycle / value chain, covering route development / optimisation, characterisation techniques and training of their internal resources. This trend is set to continue as further changes in decommissioning occur over the next decade.

It is also recognised that many NDA entities have only small numbers of resources with the knowledge and expertise needed to manage their existing and future waste arisings, as well as their historic wastes.

This ESAS framework will therefore support NWS mission and vision by providing the Client and its Customers with access to an experienced pool of expert resources and fit for purpose responsive solutions, which offer value for money, sustainability and social value.

Contractors will be required to have knowledge and understanding across the full radioactive waste management lifecycle and the ability to operate and execute work and

provide support at any stage of the lifecycle on the Customer's, Contractor's, Client's sites or elsewhere.

Contractors must have the ability to deliver all aspects of the service. Such ability may include the use of appropriate subcontractors in accordance with the conditions of contract.

II.2.5) Award criteria

Price is not the only award criterion and all criteria are stated only in the procurement documents
