II.1.4) Short description

The University requests tenders from sufficiently experienced and qualified Suppliers to establish a contract for the provision of a pair of state-of-the-art, direct detection and high-performance electron cameras (DD-EC and HP-EC), to be installed on two existing transmission electron microscopes (Jeol 2100F and 2100Plus), along with scanning TEM (STEM) diffraction system control, and an associated high-tilt, cryo-transfer holder (HT-CTH), to create a new research capability for correlated morphological and molecular dynamic investigations. Effective workflow is critical for the realisation of the many challenging projects to be enabled by this complementary equipment, to be housed within the Nanoscale and Microscale Research Centre (nmRC; <http://www.nottingham.ac.uk/nmrc/>) at the University of Nottingham (UoN). Hence, user experience and data-handling solutions for correlative investigations are of high importance. Estimated whole life cost is also an important consideration.
