The University requires a 3-Dimensional multi-omic single cell imaging platform capable of capturing both 1000s of mRNA molecules, ribosomal RNA and proteins in thick sections of tissue (up to 200um thick) deploying a confocal microscope system. It must have the ability to analysis frozen tissue and paraffin embedded tissue. It must have the ability to run multiple samples simultaneously. It is important that we resolve sub cellular localisation of RNA molecules at high plex and therefore it is important that the resolution

is capable of
