Description

The works comprise the electrical strip out and re-wire of Plas Caerdeon. It also includes the strip out and upgrade of the existing fire alarm system. It comprises of a Victorian manor house with communal GF areas including commercial kitchen as well as two upper floors which contain 15 dorm type bedrooms with separate shared bathroom facilities. There is also a separate converted stables and cottages which serve as self-catering accommodation for up to 17 people.

The Project consists of the removal of the existing electrical wiring and outlets and replacing with new electric panel heaters and outlets/switches. The existing fire alarm system is to be striped out and replaced with a fully addressable system. It is the contractor's responsibility

to design and specify the new fire alarm system and manage the works alongside the electrical installation.

In association with these works there is a requirement to fill and make good all holes, penetrations etc. left by the removal of the old equipment, and also to the new equipment and cables provided by the new installation, paying particular attention to the Fire Strategy of the building and providing fire stopping where required, by a third-party accredited fire stopping contractor. In full compliance with the buildings fire strategy.

As these works require decoration & making good, the University have requested that the decoration of all affected areas is included within the programme of works.

In association with providing the new electrical panel heaters, socket outlets and switches to the building the following electrical works will also be required to facilitate the new installation.
