Description

North Northamptonshire Council (hereafter referred to as 'the Council') is looking for a principle contractor to undertake a full rewire at one of the Councils sheltered schemes in Corby. Marlow Court comprises of thirty-three flats and communal spaces including laundry room site was constructed in the mid 1960s with a further extension constructed in the mid-1970s. Following risk assessments and a review of areas in which the Council could improve the living environment for it's residents, the works are expected to cover, but not be limited to:

- Deteriorating condition of the wiring to communal lighting and power due to age, which overtime has become a fire risk.
- The size and installation methods of the sub mains (supply cables from the meter room to the flats) means the tenants cannot have free standing cookers or electric showers in their flats. This restriction has been put in place to prevent overload and heating of the sub main supplies which are a fire risk. The option of a free-standing cooker will improve the quality of life for some tenants.
- The Council have sought a wet room adaptation, they specify electric showers that can be temperature restricted, however, due to the sub main issue the Council cannot authorise the installation of electric showers.
- The layout of the meter room has been flagged up by numerous energy providers as a health and safety risk due to the height of some of the meters. The layout also prevents the installation of smart meters for some flats.
- Age of fittings and accessories, the rewire will improve the energy efficiency of the building.
- The rewire will include the relocation of the mains supply/meter room to ground floor level - this will give easier access for tenants and resolve the health and safety issue of existing meters being too high. The increased room size will also allow for the installation of smart meters.
- The rewire will include the installation of socket outlets in appropriate locations and these will be controlled for use by Council staff only - this will prevent the sockets being misused for the charging of scooters which is a fire escape obstruction and fire risk affecting several sheltered schemes.

It is expected that these works are to be carried out within a 'live' environment and the scheme will remain occupied for the during of the works. The Council expect substantial planning to enable continuous supply of power whilst switching from existing supplies to new. The Council have worked with a third party designer to provide tender information

and the Council expect the preferred contractor to continue to liaise with the Council's design consultancy and National Grid. The works will include the installation and commissioning of new electric meters within sheltered housing scheme. The Council are looking for specialist contractors with a experience of delivering these types of works in a complex environment and with a history of working with Distribution Network Operators whilst the building is occupied.

Total value (estimated)

- £350,000 excluding VAT
- £420,000 including VAT

Below the relevant threshold

Contract dates (estimated)

- 4 May 2026 to 3 November 2026
