**Section II: Object**

**II.1) Scope of the procurement**

**II.1.1) Title**

SHEPD DPS for Constraint Managed Zones (CMZs) in Northern Scotland

**II.1.2) Main CPV code**

- 65310000 - Electricity distribution

**II.1.3) Type of contract**

Services

**II.1.4) Short description**

The Authority is looking to establish a Dynamic Purchasing System (DPS) as a procurement process to provide flexibility to our network through the establishment of Constraint Managed Zones (CMZs). A CMZ is a geographic region served by an existing network where requirements related to security of supply are met through the use of flexible services, such as demand side response, energy storage, energy efficiency and stand-by generation.

#### **II.1.6) Information about lots**

This contract is divided into lots: No

### **II.2) Description**

#### **II.2.2) Additional CPV code(s)**

- 65310000 - Electricity distribution
- 09310000 - Electricity
- 65320000 - Operation of electrical installations
- 31682000 - Electricity supplies

#### **II.2.3) Place of performance**

#### **II.2.4) Description of the procurement**

A Constraint Managed Zone (CMZ) is a geographic region served by an existing network where requirements related to network security are met through the use of load variation techniques, such as Demand Side Response, Energy Storage and generators. These techniques are CMZ services provided to SSEN by a CMZ Provider, however across the wider industry these services are recognised as 'flexibility services'.

A CMZ is an area of our existing electrical network that is or could potentially experience one of the following scenarios;

- Forecast to exceed its firm capacity, where network requirements related to peak electrical demand are met using demand reducing or demand shifting techniques, CMZ

techniques do not seek to increase capacity on the network, but rather will reduce or time-shift demand to avoid capacity constraints.

- Will experience planned maintenance works, where distributed energy resources (DER) flexibility services could be employed to maintain network operation or reduce the risk of outage,
- Could experience outages due to a combination of maintenance works and/or circuit faults, where DER flexibility services could be employed to avoid or minimise outages,
- In the event of outages, DER flexibility services could be employed to aid in the restoration of normal supply by reducing loading or providing additional power injection.

#### **II.2.5) Award criteria**

Price is not the only award criterion and all criteria are stated only in the procurement documents
