## Section II: Object

### II.1) Scope of the procurement

#### II.1.1) Title

Repository Infrastructure Contract Frameworks RIF2

#### II.1.2) Main CPV code

- 45000000 - Construction work

#### II.1.3) Type of contract

Works

#### II.1.4) Short description

Nuclear Waste Services brings together the UK's leading nuclear waste management capabilities. We have integrated the expertise of Low Level Waste Repository (LLWR), Radioactive Waste Management (RWM), and the Nuclear Decommissioning Authority (NDA) group's Integrated Waste Management Programme (IWMP). This creates an organisation focused on the management of the UK's nuclear waste, safely and securely for generations to come. Established in 1959, the LLWR accepts low-level radioactive waste from all over the country and disposes of it in a way that protects people and the environment. The two potential contracts covered by this PIN are: 1 - Site Works & Demolition To facilitate delivery of site works for the aforementioned scope, the following capabilities are being sort from the supply-chain: Multidiscipline site works delivery encompassing minor civils, mechanical and CE&I installations, testing and commissioning. Production of single discipline and / or low complexity detailed design outputs and solutions for self-delivery (design and build) or subcontract delivery via supply-chain. Demolition and land remediation capability, including access to specialist services via supply-chain network for example, environmental / contamination analysis, waste management Capability for handling and removal of asbestos, and ground contaminants associated with Royal Ordnance Factory legacy products. 2 - Design & Professional Services Production of approved multi-discipline (CS&A, Mechanical, CE&I) design and engineering outputs and solutions for the entire design and facility lifecycles (concept, optioneering, engineering studies, optimisation and value engineering, preliminary and detailed design, design support to the installation contractor during construction/installation and commissioning, production of as-built information, modifications to operational facilities, decommissioning and demolition) .
