## II.1.4) Short description

Located on the Harwell Science and Innovation Campus in Oxfordshire, Diamond Light Source (DLS) is a leading-edge facility for science, engineering and innovation. Diamond allows researchers from academia and industry to investigate the structure and behaviour of the world around us at the atomic and molecular level.

To continue delivery the world-changing science that Diamond enables, the facility is being upgraded to Diamond-II, a co-ordinated programme of development that combines a major machine upgrade with new instruments and complementary improvements to optics, detectors, sample environment and delivery capabilities, and computing, as well as integrated and correlative methods. This will be transformative in speed and spatial resolution and will offer users streamlined access to enhanced instruments for life and physical sciences.

The scope of the contract is for a Supplier to design, manufacture, test and deliver to DLS two identical complete turn-key in-vacuum hybrid permanent magnet undulators (HPMUs), subject to this performance specification, together with all necessary drawings and documentation to ensure the ID can be operated and maintained without supplier support if necessary.

#### II.1.6) Information about lots
