Description

London Underground (LU) Track Access Planning tool used across LU to plan all engineering works. TfL must become more efficient at planning engineering works across the transport network. It has been recognised that access to TfL locations such as tracks, platforms, sidings, stations, bus and rail depots must be improved. To support this, there is a requirement for a new Commercial off the Shelf (COTS) planning and scheduling software application that will help simplify the current access, scheduling and booking process for all engineering and maintenance works.
