The integrated spectrometer is intended to act as both a primary analytical assay in its own right, and as a robust multiplex alternative to the other cell enumeration, titre and metabolite assays currently available on-site. It is critical to note that the ability of the system to be directly integrated with an ambr-250 at both a hardware and software level is of paramount importance. Raman spectra produced using the spectrometer should be capable of being fed back to the ambr-250 and utilised to control related cell culture parameters, such as feeding rates, in an automated manner.
