A patient drape is defined as a medical device which covers the patient creating a sterile field

around the surgical site and which acts as a barrier to prevent the risk of surgical site infection. An equipment drape is defined as a medical device which is used to cover nonsterile

equipment for use in the sterile field.

Design features on drapes, enable easy and efficient draping by one person, often specific to

the needs of a particular surgery with adaptations for tubing, instruments and even the change

of patient position, along with skin adhesives as appropriate, also includes equipment

drapes which maintain the sterile field in surgery, differentiate the market offers and ensure

greater stakeholder interest.

### **II.2.4) Description of the procurement**

This Lot comprises of single use eye protection such as goggles/glasses and face

shields/visor and must meet EN166:2002 or equivalent.

Goggles/glasses are made with a flexible plastic frame and one or two lenses with a flexible

elastic headband. Some can be worn with prescription glasses. Goggles/glasses give the eyes

protection from all angles as the complete rim is in contact with the face. Goggles/glasses provide barrier protection to the eyes against exposure to liquid droplets and splashes.

Glasses can be provided as single units or in 2 parts.

Face shields/visors have one large lens with a frame and adjustable head harness or are mounted on a helmet. Most can be worn with prescription glasses. They provide barrier protection against liquid splashes to the face but do not fully enclose the eyes.
