Description

The Jubilee line 96TS (1996 Train Stock) CCTV system is experiencing high failure rates due to a combination of unavailability of replacement components due to obsolescence and environmental damage, such as water ingress and dirt accumulation.

An engineering assessment of the current system has been undertaken to understand the extent of obsolescence, component, and wiring condition as well as standards and legislation requirements. Conclusions from this work confirmed the need for a maintenance and/or replacement project that will seek and deliver the most suitable mid- and long-term solution to address the issues.

As a result, the following options have been enlisted to be taken forward into early market engagement as part of the feasibility stage process and market capability assessment.

Option 1: Maintain the existing system until the end of fleet life (2045) by repairing the existing cameras and DVRs and/or sourcing alternate cameras and DVRs to fit on failure.

Option 2: Replacement of existing saloon CCTV hardware (cameras and DVRs) for the entire fleet, utilising existing coaxial cabling. Newly installed cameras and DVRs with improved functionality up to the limits of the existing train cabling.

Option 3: Replacement of existing saloon CCTV hardware with modern digital and ethernet based systems utilising the ethernet backbone implemented in a new / recent project.

After the feasibility stage the preferred solution will be progressed to tender with the intention of implementing it on all of London Underground's 63 Jubilee Line 96TS fleet of trains.

Total value (estimated)

- £2,500,000 excluding VAT
- £3,000,000 including VAT

Above the relevant threshold

Contract dates (estimated)

- 1 June 2027 to 1 June 2029
- Possible extension to 1 June 2030
- 3 years, 1 day

Main procurement category

Services

CPV classifications

- 34620000 - Rolling stock
- 92222000 - Closed circuit television services

Contract locations
