Change from open to closed framework

Scope

Reference

HSE T4779

Description

The Chemicals Regulation Division (CRD) wishes to establish a new research and development (R&D) framework with six specific lots (A-F).

This framework will be structured into specialism based lots. Each lot is designed to hold more than one supplier to allow a varied skill set across each lot.

A specification will be written for each project and HSE will then consider the specification against each supplier to determine which supplier's expertise is best suited to the project. If more than one supplier has the relevant experience, a cab rank system will be used (further detail on this process is provided in section 4). Due to the nature of the type of R&D projects that will be brought forward, we are aware that not all suppliers in a lot may necessarily be able to undertake all the projects brought forward, so this approach ensures projects will be allocated to the most relevant supplier.

HSE reserve the right to allocate projects to other suppliers in the framework, outside of the specified lot, if all the suppliers allocated to a lot are not able to undertake the project.

This framework will be open to usage from all HSE teams. The framework will enable faster turnaround of R&D. It also provides a more cost effective and less burdensome way of commissioning research projects.

The framework is designed to be a 4 year contract.

We are unsure how many times we will use each individual Lot on the R&D Framework throughout the four year period. The award of each individual Lot does not guarantee any amount of work during the contract agreement period.

Whilst we anticipate using each individual Lot on the R&D Framework to fulfil our needs, we do reserve the right to choose to commission such work through other means and with other suppliers as we see fit.

3. SCOPE OF THE SERVICES REQUIRED

The R&D Framework will be structured into 6 specialism based lots:

- Lot A - Chemistry
- Lot B - Ecotoxicology
- Lot C - Efficacy
- Lot D - Fate and Behaviour

- Lot E - Residues
- Lot F - Toxicology

Suppliers may, apply for one, some or all of lots (A-F). We intend to appoint 4 suppliers for each lot.

Commercial tool

Establishes a framework

Total value (estimated)

- £1,666,667 excluding VAT
- £2,000,000 including VAT

Above the relevant threshold

Contract dates (estimated)

- 21 August 2025 to 20 August 2029
- 4 years

Main procurement category

Services

CPV classifications

- 73000000 - Research and development services and related consultancy services

Contract locations

- UK - United Kingdom
-

Lot A (was 1). Chemistry

Description

Lot A - Chemistry

Primary quantitative research and analysis

All types of primary quantitative research. To exemplify, primary methods may include (but not be limited to):

- Method development
- Application and validation of methods and techniques
- Adaptation and extension of existing techniques
- Associated work such as: securing samples, interpreting data and results,
- Analyses, reporting and the generation of key scientific outcomes and recommendations from the work

To include, but not be limited to methods and approaches that enable the development of methods for the analysis of pesticide active substances, impurities and co-formulants in pesticide formulations, and of residues of pesticide active substances and metabolites in food and feeds

Lot value (estimated)

- £277,777 excluding VAT
- £333,333 including VAT

Framework lot values may be shared with other lots

Same for all lots

CPV classifications, contract locations and contract dates are shown in the Scope section, because they are the same for all lots.

Lot B. Ecotoxicology

Description

All types of secondary analysis. To exemplify, methods may include (but are not limited to):

- Desk research
- Literature reviews
- Quantitative summaries
- Systematic reviews
- Horizon scanning
- Plus analyses, reporting and the generation of key scientific evidence, regulatory developments and recommendations from the work.

Topics may include

- Birds
- Mammals
- Aquatic (including sediment) organisms

- Bees and other pollinators
- Non-target arthropods
- Soil organisms
- Non-target plants
- Biopesticides
- Endocrine disruption
- Effect modelling
- Linking exposure and effects
- New technology
- Risk assessment for precision agriculture
- Climate change
- Bioaccumulation
- Biodiversity
- Protection Goals
- Risk mitigation
- Novel / alternative application methods
- Chemical mixtures and multiple stressors
- Landscape scale assessment
- Sublethal effects
- Community and ecosystems

Lot value (estimated)

- £277,777 excluding VAT
- £333,333 including VAT

Framework lot values may be shared with other lots

Same for all lots

CPV classifications, contract locations and contract dates are shown in the Scope section, because they are the same for all lots.

Lot C. Efficacy

Description

- Evidence on the impact of selection pressures exerted by the use of plant protection products on resistance development and the mechanisms of resistance. Informing the development of resistance management strategies to support sustainable crop production.
- Evidence on developing novel and integrated approaches for the control of pests, weeds and diseases, taking into account any adaptation and mitigation measures arising from climate change, and what impact this may have on efficacy regulatory requirements.
- Evidence on the impact of different application technologies on the efficacy of plant protection products, including impacts on resistance development, and what changes or adaptations to efficacy regulatory requirements may be needed.
- Evaluating the scope of new technologies for assessing biological parameters in efficacy field trials.
- Evaluating the current and changing status of target species, cropping practices and PPP availability to inform the assessment of the agronomic relevance of PPPs and establish future challenges for pest and resistance management.
- The impact of formulation chemistry on the biological efficacy of PPPs

Lot value (estimated)

- £277,777 excluding VAT
- £333,333 including VAT

Framework lot values may be shared with other lots

Same for all lots

CPV classifications, contract locations and contract dates are shown in the Scope section, because they are the same for all lots.

Lot D. Fate and Behaviour

Description

All types of secondary analysis. To exemplify, methods may include (but are not limited to):

- Desk research
- Literature reviews
- Quantitative summaries
- Systematic reviews
- Horizon scanning
- Model or software development
- Plus analyses, reporting and the generation of key scientific evidence, regulatory developments and recommendations from the work.
- Proactive secondary collection (e.g. contacting organisations via phone/web to gather evidence and examples of practice - which may include interviews)

Topics may include

- Degradation
- Sorption
- Environmental fate and behaviour in soil, water, sediment, air
- Routes of environmental exposure
- Spray drift
- Runoff
- Drainflow
- Groundwater leaching
- Long range transport
- Plant uptake
- POPs and PBTs
- Exposure modelling
- Scenario development
- Surrogate crops
- Linking exposure and effects
- New technology
- Drones
- Novel / alternative application methods
- Crop specific exposure assessments
- Hard surfaces
- Biopesticides

- Metals
- Metabolites
- Unextracted residues
- Climate change
- Risk mitigation
- Higher tier modelling
- Spatial assessments
- Landscape or catchment scale exposure assessments
- Water treatment processes
- Environmental monitoring
- Exposure assessment goals

Lot value (estimated)

- £277,777 excluding VAT
- £333,333 including VAT

Framework lot values may be shared with other lots

Same for all lots

CPV classifications, contract locations and contract dates are shown in the Scope section, because they are the same for all lots.

Lot E. Residues

Description

All types of secondary analysis. To exemplify, methods may include (but are not limited to):

- Desk research
- Literature reviews
- Quantitative summaries
- Systematic reviews
- Horizon scanning
- Plus analyses, reporting and the generation of key scientific evidence, regulatory developments and recommendations from the work.

Topics may include

- Impact of new application techniques, including drones on residue levels in crops
- Storage stability
- Metabolism in plants and animals, including fish
- Extraction efficiency
- Uncertainties within the residues assessment, MRL setting and consumer risk assessments
- Residue trial parameters, and their impact on residue levels
- Proportionality/ scaling of residues
- Crop to crop extrapolations
- Impact of processing
- Residues in rotational crops
- Residues in honey and other bee products
- Residues in fish, including the diets of farmed fish

- Consumption data
- Approaches to consumer risk assessments

Lot value (estimated)

- £277,777 excluding VAT
- £333,333 including VAT

Framework lot values may be shared with other lots

Same for all lots

CPV classifications, contract locations and contract dates are shown in the Scope section, because they are the same for all lots.

Lot F. Toxicology Secondary Analysis

Description

All types of secondary analysis. To exemplify, methods may include (but are not limited to):

- Desk research
- Literature reviews
- Quantitative summaries
- Systematic reviews
- Horizon scanning
- Plus analyses, reporting and the generation of key scientific evidence, regulatory developments and recommendations from the work.

Topics may include

- Acute toxicity
- Skin and eye irritation
- Skin sensitisation
- Phototoxicity
- Repeated dose toxicity
- Genotoxicity
- Carcinogenicity
- Reproductive toxicity
- Developmental neurotoxicity
- Endocrine disruption
- ADME and dermal absorption
- Modelling
- In silico tools
- TTC approach
- NAMs
- Epidemiology
- Uncertainty
- NGRA
- Protection Goals
- Risk mitigation
- Risk communication

- Co-formulants
- 3Rs
- Chemical mixtures
- Biopesticides
- Antimicrobial resistance
- Effects on the gut microbiome
- Dose setting and maximum tolerated dose
- Kinetically-informed maximum dose

Lot value (estimated)

- £277,777 excluding VAT
- £333,333 including VAT

Framework lot values may be shared with other lots

Same for all lots

CPV classifications, contract locations and contract dates are shown in the Scope section, because they are the same for all lots.

Framework

See Details in the Governments e-tender portal Intend

Award method when using the framework

Either with or without competition

Contracting authorities that may use the framework

Establishing party only

Participation

Particular suitability

Lot A (was 1). Chemistry

Lot B. Ecotoxicology

Lot C. Efficacy

Lot D. Fate and Behaviour

Lot E. Residues

Lot F. Toxicology Secondary Analysis

- Small and medium-sized enterprises (SME)

- Voluntary, community and social enterprises (VCSE)

Submission

Enquiry deadline

25 June 2025, 5:00pm

Tender submission deadline

14 July 2025, 1:00pm

Electronic auction will be used

Yes

Submission address and any special instructions

All tender documents are available via the HSE In-Tend supplier e-procurement portal. All responses and requests for clarification must be submitted via the portal. Registration is free of charge and can be completed via the following link:

<https://in-tendhost.co.uk/hse>

Tenders may be submitted electronically

Yes

Languages that may be used for submission

English

Award decision date (estimated)

21 August 2025

Award criteria

Name	Type	Weighting
Quality	Quality	60%
Commercial	Price	30%
Social Value	Quality	10%

Other information**Payment terms**

For Lots A - F an arbitrary spend amount per Lot has been input to allow the Notice to be published. There is no guarantee of any minimum/maximum amount of spend per Lot and spend will be allocated per project.

Conflicts assessment prepared/revised

Yes
