II.1.1) Title

PFAS Risk Screening Project Phase 4 – Work Package 2-4

II.1.2) Main CPV code

- 71356000 - Technical services

II.1.3) Type of contract

Services

II.1.4) Short description

The overarching PFAS Risk Screening Project, now in its fourth phase, aims to assess and tackle the risks arising from a group of “forever chemicals” which are contaminating soil, groundwater and surface waters and pose a risk to human health. Increasing awareness of the widespread presence of PFAS in environmental media has heightened regulatory concerns about their potential risks to human health and the environment. A recent evidence review by the EA has identified large data gaps in relation to the uses, sources, and mass emissions of PFAS in the UK. This report recommends further research and investigative work to evaluate the sources, both current and legacy, that are contributing to the widespread nature of this family of contaminants.

This objective of this procurement is to source up to three services contracts with a consultant(s) who can deliver the following Work Packages:

WP2 - Lot 1. Development of Best Practice Guidance

WP3 - Lot 2. Detailed Assessment of Potential PFAS Problem Sites:

- o In-depth desk studies of x10 highlighted problem sites
- o Site investigation of x1 prioritised site (Grosvenor Chemicals)

WP4 - Lot 3. Economic Appraisal

II.1.6) Information about lots

This contract is divided into lots: Yes

II.1.7) Total value of the procurement (excluding VAT)

Value excluding VAT: £1,550,000

II.2.3) Place of performance

NUTS codes

- UK - United Kingdom

II.2.4) Description of the procurement

The primary objective is to develop a reference guide aimed at those involved in the regulation of sites of concern due to the impact, or potential impact, from PFAS and associated chemicals. Staff can refer to the guide when faced with sites highlighted under voluntary schemes, regulatory regimes, or pollution incidents. The guide will provide background to the problem, the nature and characteristics of these chemicals, and the tailored approach necessary to best assess the risk, apply regulatory controls and ultimately implement mitigation measures (if necessary). The step-by-step guide will adopt the classic land contamination evaluation approach, indicating how at each stage of site assessment the site evaluation strategy should be conducted when considering contaminants of this nature.
