### **Scope**

### **Reference**

CA18/2/1/117

### **Description**

The Mining Remediation Authority (MRA) is seeking a contractor to construct a flow monitoring structure at the outfall of a historic culvert. This culvert drains the dressing floor of a former mine site. The purpose of the structure is to enable accurate measurement of water flows entering a recently lined stream.

Following the application of concrete canvas to line the stream, water discharging from the culvert is no longer contained within the channel. This is due to the culvert's invert level being lower than the level of the stream lining at the discharge point, causing water to flow beneath the lined channel. As a result, sediment has accumulated near the culvert outlet.

The proposed works involve modifying the existing stone-lined culvert to intercept and convey flow to a suitable downstream location. At this point, a V-notch weir will be

installed to discharge into the lined stream, allowing for accurate flow measurement.

Due to the risk of sediment build-up within the culvert, a CCTV survey will be required to assess sediment volume. If necessary, sediment will be removed to prevent future obstruction of the monitoring structure.

The estimated budget for the works is £80,000.

### **Contract dates (estimated)**

- 1 December 2025 to 31 March 2026
- Possible extension to 30 June 2026
- 7 months

### **Main procurement category**

Services

### **CPV classifications**

- 71300000 - Engineering services

### **Contract locations**

- UKL1 - West Wales and the Valleys

---

## **Engagement**

## **Engagement deadline**

31 July 2025

## **Engagement process description**

Please contact us if you have any questions about this opportunity or wish to be informed of progress

---

## **Participation**

### **Particular suitability**

Small and medium-sized enterprises (SME)

---

## **Submission**

### **Publication date of tender notice (estimated)**

1 September 2025
