Planning

## **Optimisation of Water Services**

ANGLIAN WATER SERVICES LIMITED

F04: Periodic indicative notice – utilities

Periodic indicative notice only

Notice identifier: 2023/S 000-035119

Procurement identifier (OCID): ocds-h6vhtk-041d76

Published 28 November 2023, 5:21pm

### **Section I: Contracting entity**

#### **I.1) Name and addresses**

ANGLIAN WATER SERVICES LIMITED

Lancaster House Lancaster Way, Ermine Business Park

HUNTINGDON

PE296XU

#### **Contact**

Neil Ison

#### **Email**

[nison@anglianwater.co.uk](mailto:nison@anglianwater.co.uk)

#### **Country**

United Kingdom

**Region code**

UKH12 - Cambridgeshire CC

**Companies House**

02366656

**Internet address(es)**

Main address

<https://faq.anglianwater.co.uk/>

**I.3) Communication**

The procurement documents are available for unrestricted and full direct access, free of charge, at

<https://esourcing.scanmarket.com/Events/PublicEvents/3004/57aa08f02740e2c172f509ae0fa4807a/all>

Additional information can be obtained from the above-mentioned address

**I.6) Main activity**

Water

---

**Section II: Object****II.1) Scope of the procurement****II.1.1) Title**

Optimisation of Water Services

**II.1.2) Main CPV code**

- 72212100 - Industry specific software development services

**II.1.3) Type of contract**

## Services

### II.1.4) Short description

Anglian Water currently operate a large interconnected water supply system, set across a broad and diverse geographical region. These systems often have complex operations based upon multiple and changing parameters. Further adding to this complexity is a new Strategic Pipeline spanning the length of Anglian Waters network, increasing the ability to proactively manage water resources and improve resilience is currently being constructed. However this creates further complexity across the Water system which requires additional capability enabling Anglian Water to adopt a more holistic approach.

Water utilities are all facing the same challenges; to drive operational efficiency, enhance system wide operations and improve risk management while aiming for frontier performance in strategic outcomes. Currently Anglian Water operate an existing SCADA network (Out of Scope) with significant levels of automation. This market research is looking to identify the complementary systems available to meet these ever-increasing challenges from source to tap. Therefore, Anglian Water will need to further develop our current control philosophies to move to a planned production environment (Production Planning), through the implementation of more advanced software systems within our OT and IT Architecture. This will provide the ability to operate the water system proactively and enable autonomous control, or to respond to meet the changing requirements and challenges placed upon a smart water system.

The sorts of decisions would include the management and optimisation of:

- Abstraction licence control (Water resourcing)
- Production and distribution costs
- Energy efficiency
- Renewable energy sources
- Asset conditioning
- Water quality
- Supply demand balance (Current)
- Supply demand balance (Forecast)
- Maintenance planning (To enable production planning)

- Water storage points
- Incident management (Appropriate response to unplanned water system events)
- Manual scenario planning

There is also consideration in the ability to utilise these solutions to manually assess scenarios to inform planning activities and future investments.

### **II.1.6) Information about lots**

This contract is divided into lots: No

## **II.2) Description**

### **II.2.2) Additional CPV code(s)**

- 48150000 - Industrial control software package

### **II.2.3) Place of performance**

NUTS codes

- UKH - East of England

### **II.2.4) Description of the procurement**

Anglian Water currently operate a large interconnected water supply system, set across a broad and diverse geographical region. These systems often have complex operations based upon multiple and changing parameters. Further adding to this complexity is a new Strategic Pipeline spanning the length of Anglian Waters network, increasing the ability to proactively manage water resources and improve resilience is currently being constructed. However this creates further complexity across the Water system which requires additional capability enabling Anglian Water to adopt a more holistic approach.

Water utilities are all facing the same challenges; to drive operational efficiency, enhance system wide operations and improve risk management while aiming for frontier performance in strategic outcomes. Currently Anglian Water operate an existing SCADA network (Out of Scope) with significant levels of automation. This market research is looking to identify the complementary systems available to meet these ever-increasing challenges from source to tap. Therefore, Anglian Water will need to further develop our current control philosophies to move to a planned production environment (Production Planning), through the implementation of more advanced software systems within our OT and IT Architecture. This

will provide the ability to operate the water system proactively and enable autonomous control, or to respond to meet the changing requirements and challenges placed upon a smart water system.

The sorts of decisions would include the management and optimisation of:

- Abstraction licence control (Water resourcing)
- Production and distribution costs
- Energy efficiency
- Renewable energy sources
- Asset conditioning
- Water quality
- Supply demand balance (Current)
- Supply demand balance (Forecast)

- Manual scenario planning

There is also consideration in the ability to utilise these solutions to manually assess scenarios to inform planning activities and future investments.

### **II.3) Estimated date of publication of contract notice**

1 October 2024

---

## **Section IV. Procedure**

### **IV.1) Description**

#### **IV.1.8) Information about the Government Procurement Agreement (GPA)**

The procurement is covered by the Government Procurement Agreement: Yes

### **IV.2) Administrative information**

#### **IV.2.2) Time limit for receipt of expressions of interest**

Date

5 January 2024

Local time

11:00pm

#### **IV.2.4) Languages in which tenders or requests to participate may be submitted**

English
