II.1.3) Type of contract

Supplies

II.1.4) Short description

Transport for London (TfL) operates a number of surveillance camera systems in support of the services it provides across London. These are used for a variety of purposes including traffic management, traffic enforcement, incident management, security monitoring and health and safety management, and are used by numerous stakeholders, including operational control rooms, and third parties. The current Video Management System (VMS) is one of these surveillance systems and this covers the streets and road

tunnels network, enabling the sharing of footage from c.1200 TfL CCTV outstation cameras and c.4000-5000 external cameras working with:

- o City of London Police;
- o Metropolitan Police;
- o National Highways;
- o London Boroughs;
- o Media organisations;
- o London Fire Brigade; and
- o London Ambulance Service.

This Contract Notice relates to the replacement of the current VMS, with a single new cost effective, scalable, fit for purpose TfL Video Management System (TVMS). The successful TVMS supplier will be required to develop, implement, support and maintain a TVMS solution that meets TfL's requirements (TVMS Requirements). Whilst it is expected that the initial focus during the transition phase will be on streets and road tunnels, the new TVMS solution will also need to be capable of integrating with other TfL Systems and scaling to incorporate components and system interfaces from TfL bus station and river pier sites, as may be required by TfL during the life of the contract.
