## **Section II: Object**

### **II.1) Scope of the procurement**

#### **II.1.1) Title**

Next Generation Telemetry System

#### **II.1.2) Main CPV code**

- 48000000 - Software package and information systems

#### **II.1.3) Type of contract**

Supplies

#### **II.1.4) Short description**

SEPA is responsible for ~700 monitoring stations equipped with a variety of sensors, data-loggers and telecommunication equipment, servicing observations across all environmental media.

The data collected on the loggers are automatically transmitted to a central archive database via a telemetry management system, from whence they are automatically processed and distributed to a range of reporting and operational end-uses.

SEPA requires this system to be replaced.

#### **II.1.6) Information about lots**

This contract is divided into lots: No

### **II.2) Description**

#### **II.2.2) Additional CPV code(s)**

#### **II.2.4) Description of the procurement**

SEPA is responsible for ~700 monitoring stations equipped with a variety of sensors, data-loggers and telecommunication equipment, servicing observations across all environmental media.

Various data-loggers are in use, supporting multiple transducer channels and protocols, including industry-standard analogue and digital communications. Very few stations enjoy mains electricity connections, so most are battery-powered, typically supported by solar PV arrays.

The data collected on the loggers are automatically transmitted to a central archive database via a telemetry management system, from whence they are automatically processed and distributed to a range of reporting and operational end-uses.

The existing system is in transition from 'pull' to 'push' data transmission to the central archive and, as such, includes a mixture of wired and radio telephony, and wireless digital communications.

SEPA require this system to be replaced.
