II.1.4) Short description

Geospatial (land) data is a critical asset for Defra as it provides insight into land use to inform policy decisions that can be distributed effectively to maximize economic growth whilst supporting nature recovery. The Geospatial Enabling Programme can enable delivery of better policy making to deliver our priorities, by resolving issues within the geospatial data landscape and developing the spatial targeting capability.

A lack of accurate geospatial (land) data has meant that historically multiple versions of the same area of land exist across Defra group and there are areas of rural land not currently captured in Defra mapping systems. This inhibits effective policy development through spatial targeting due to differing views of the geometry and land use. This also translates into a poor end user experience, where farmers are asked repeatedly to input the same information into different systems belonging to the Defra group.

The purpose of this notice is for DEFRA to make known that a Further Competition is being conducted under the CCS Space-Enabled and Geospatial Services Dynamic Purchasing System (DPS) (reference RM6235) for a Delivery Partner to support the Geospatial Enabling Programme.

II.2.4) Description of the procurement

To correct this situation, the Geospatial Enabling Programme are targeting an Industry Partner who can deliver against the following priorities:

- Develop prototypes and design the following based on user/business requirements from across Defra and 6 ALBs:
 - An authoritative source of land use and boundary map for rural England (common land base map (master reference layer) generated from Defra's insights and other data products
 - o Providing a common map of land to facilitate collaboration
 - o Will provide accurate data that can be exploited by innovative technology, for example drone surveillance and AI
 - o It will support streamlining of grants processes, by providing improved access to land use data for spatial targeting of subsidies, grants and financial incentives more efficiently
 - Integrate existing foundational land datasets for England derived from ALBs and 3rd parties into one data product (Defra Land Model) to:
 - o Prevent duplication and maximize investment in licensing
 - o To support data sharing across Defra Group for the effective delivery of outcomes
 - o Reducing data debt across the Defra Group that will ensure policy and delivery teams are using consistent data to drive decisions, thereby reducing the impact of conflicting policy interventions
 - o To provide accessibility to foundational land datasets for all Defra and the 6 ALBs
- Development and delivery of a common geospatial data standard framework to enable sharing of data across Defra Group and externally
- To define a service model which will focus on data management, data governance of

the master reference layer and Defra land model
