Description

This project aims to assist the DAMCP by developing a data management system for use across divisions within the department. The development aims to facilitate data storage, access and use across DAMCP, support data sharing with other government departments, and promote sustainable data management to enable effective retention and continued use of datasets. There may also be scope to include other functionalities to treat data to identify trends, and visualise data (such as data modelling, overlapping of maps, etc.)

Different data types are collected and collated by the DAMCP - physical & chemical data, biological data (species abundance/presence, species richness, etc.), habitat data, and human use data. The data may be collected by a field scientist but used or shared with other staff member to build trends, monitor effectiveness of MPA and guide decision. At

present, there is a lack of consistency in data gathering and sharing within the DAMCP and the risk of lost data is a key priority the DAMCP are hoping to rectify. The aim of the data management system is to bring together collated datasets and to facilitate data sharing within the DAMCP.

In developing an effective data management solution to facilitate easy access to data required across the department, this project will support DAMCP staff in making evidence-based decisions to ensure effective protection of Senegal's environment. The objectives of the project are:

- To create a simple, user-friendly data management and visualisation system that integrates different data types from across the division and meets the requirements summarised in the attached user research report and Section 4.
- To utilise existing and open-source software where possible.
- To work with the DAMCP's IT specialist to identify a sustainable server-based hosting solution.
- To ensure the system links with existing data systems in place where possible, promoting data sharing across government departments.
- Provide training and guidance documentation to support DAMCP staff in using the system.

The value of the contract is £97,280.00 GBP (outside the scope of VAT)

Contract 1. Ocean Country Partnership Programme: Senegal Development of the DAMCP Data Management System

Supplier

- BAAMTU DATAMATION

Contract value

- £97,280 excluding VAT
- £97,280 including VAT
