II.1.4) Short description

Northern Gas Networks has a large portfolio of unmanned gas infrastructure sites, varying in complexities and security risks they

face. As such, a 'risk based' approach is adopted by NGN to coordinate the implementation of security measures across its

portfolio of sites, thus overall increasing site resistance to security threats, now and in the future. NGN recognise security risk is

fluid and can be variable dependent on the sites activity, specifically site construction. To

allow NGN to efficiently and effectively

manage change in security risks, it has identified the need for a security framework, allowing temporary security measures to be

deployed to its sites in times of site constructions and sudden security risk change.
