Published 22 July 2025, 3:31pm

### **Scope**

### **Description**

The Department for Education (the department) are looking for a provider to scope, test and begin delivering a support offer (Centre of Excellence) to help local authorities (LAs) improve their data and digital maturity with respect to children's social care (CSC) services.

The incoming government has prioritised 'Multi Agency Information Sharing' (MAIS) as a key focus in their manifesto. To help ready the sector for MAIS technical solutions and get the foundations of data and digital knowledge and confident leadership across all LAs in place, the department will provide a support offer to help LAs improve their data and digital maturity with respect to CSC services. This includes the sector's ability to secure, use and share data; and to deliver user-centred case management systems (CMS).

The department wants to understand what and how support could be offered for maximum impact, and to begin delivering the support offer. To deliver this work, it is recognised that the successful bidder will need to work closely with the department and those working in data and digital roles related to CSC in LAs.

The supplier will:

- work with the department and LAs to co-develop a vision and action plans for a data and digitally mature sector
- provide expertise on CSC data and digital, including hands-on support with specific LAs
- help LAs optimise how they customise and procure their digital CMS
- develop tools and resources that meet the needs of users
- plan research to provide a more detailed picture of CSC data quality, identifying where to focus improvements
- facilitate knowledge sharing, innovation, and collaboration between LAs, to share guidance, best practice and ideas - creating spaces where LAs can learn from each other both about what works and what does not, and how to utilise future technologies
- plan help with career and skills development to grow capability and capacity - training programmes and guidance that support continuous professional development, upskilling (including potentially around the use of AI), and those joining the profession; with shorter data/digital skills training/courses as well as longer ones (e.g. apprenticeships) to make building a data or digital career within LAs more achievable and attractive
