Description

In the upcoming changes to Approved Document B (ADB) the national fire test standards will be removed. This will mean the only route to compliance when assessing the reaction to fire classification of construction products in ADB is using the Euro classification system. This classification system is defined in BS EN 13501-1 and one of the standard tests within this series of tests is referred to as the Single Burning Item test (SBI).

The SBI test, described by BS EN 13823, is needed to classify all non-flooring products into classes A2, B, C and D of the European Commission construction products directive. These classes cover most products intended for building and construction end-use.

The SBI test is a method of test for determining the reaction to fire behaviour of building products when exposed to thermal attack by a single burning item comprising a standard propane burner. The reaction of the product to the burner is monitored with instruments, and the heat and smoke release rates and physical characteristics are assessed by

observation.

HSE SD provides expert guidance and opinion, and technical support, to the Building Safety Division (BSD), as well as overseeing research projects focused on the building and construction subject area.

To assist the technical policy team within BSD in developing guidance and allow HSE SD to support BSD, the product assessment regulator and construction industries, with research around this test standard. HSE SD requires a SBI test facility to test and assess the fire behaviour of building and construction products against the classification criteria requirements in BS EN 13823.

Total value (estimated)

- £232,500 excluding VAT
- £279,000 including VAT

Above the relevant threshold

Contract dates (estimated)

- 13 October 2025 to 13 October 2025
- 1 day

Main procurement category

Goods

CPV classifications

- 38540000 - Machines and apparatus for testing and measuring

Weighting description

The successful supplier will be selected based on the appropriateness of the suggested product to HSE's needs combined with an assessment of the cost against other tender submissions. This means that the lowest bid may not necessarily be accepted.

Of particular interest will be:

- how the equipment complies with BS EN 13823
- Output data, its accuracy and format
- How the equipment will interface to the existing infrastructure, particularly the exhaust/ventilation requirements and methods. It should ensure that the extraction system connected to the equipment can provide the extraction rates specified in the standard at the elevated temperatures produced.

Other information

Payment terms

HSE is unable to agree to any advance payment prior to shipment. This approach does not align with Government procurement terms. As a Government department backed by the Treasury, HSE does not present a credit risk to suppliers.

If a bidder expresses interest in this opportunity but requires an upfront payment, they must disclose this during the Q&A stage. In such cases, the matter would need to be escalated to HSE's Finance Director for consideration. Should the Finance Director approve the request, an amendment to the tender would be published to indicate that upfront payment is acceptable, allowing the bidder to proceed. However, such approval is considered unlikely.

Any supplier submitting a bid that includes an upfront payment requirement without explicit prior approval from HSE will have their submission disqualified.
