Award

Purchase of Quectel EG25-G Mini PCIe Units

NORTHERN GAS NETWORKS LIMITED

UK5: Transparency notice - Procurement Act 2023 - [view information about notice types](#)

Notice identifier: 2025/S 000-049322

Procurement identifier (OCID): ocds-h6vhtk-058968 ([view related notices](#))

Published 18 August 2025, 8:12am

Scope

Description

This project is of critical importance in terms of timescales. Our business-critical operational Pressure Reduction Sites (PRS) telemetry currently relies on GPRS 2G and 3G communication channels. These network services are scheduled for decommissioning by providers, as the technology is reaching its end of service life (ESoL). The deactivation of GPRS communications is set to commence later this year.

NGN will procure 250 communication units, which will enable PRS sites to connect securely via 4G to NGN's AWS SCADA infrastructure.

Contract 1

Supplier

- BRAND COMMUNICATIONS LIMITED

Contract value

- £396,752.50 excluding VAT
- £476,103 including VAT

Above the relevant threshold

Earliest date the contract will be signed

26 August 2025

Contract dates (estimated)

- 26 August 2025 to 26 August 2026
- 1 year, 1 day

Main procurement category

Goods

CPV classifications

- 32000000 - Radio, television, communication, telecommunication and related equipment

Contract locations

- UKC - North East (England)

- UKE - Yorkshire and the Humber

Other information

Conflicts assessment prepared/revised

Yes

Procedure

Procedure type

Direct award

Special regime

Utilities

Direct award justification

- Single supplier - technical reasons
- Additional or repeat goods, services or works - extension or partial replacement

This project is of critical importance in terms of timescales. Our business-critical operational Pressure Reduction Sites (PRS) telemetry currently relies on GPRS 2G and 3G communication channels. These network services are scheduled for decommissioning by providers, as the technology is reaching its end of service life (ESoL). The deactivation of GPRS communications is set to commence later this year.

NGN will procure 250 communication units, which will enable PRS sites to connect securely via 4G to NGN's AWS SCADA infrastructure.

The solution proposed by Brand Communication is already implemented and operational within our production landscape as

part of a GD2 project, supporting NGN's 23 critical offtake sites. The deployment of this solution has proven instrumental,

markedly enhancing network reliability, performance, and security across all offtake locations.

Brand Communication's solution allows NGN to mitigate the business risks associated with the GPRS switch-off and its

potential operational impact by migrating PRS telemetry traffic to secure 4G communication channels. Furthermore, it enables

the extension of the proven solution used for our critical offtake sites to the broader range of PRS sites in scope.

Should NGN look to not direct award for this solution, the risk of failing to complete deployment prior to the GPRS

switch-off would be significant. This is primarily due to the extensive development and integration required to ensure

compatibility with existing Brand and AWS environments, which would likely result in increased costs and extended

implementation timelines. By extending the existing Brand Communication solution to the PRS sites, these risks are effectively mitigated.
