Reference

980552769

Description

This research aims to understand the regulatory, safety and operational requirements that would enable more

bulk mail and light goods traffic to be handled using existing station infrastructure. To do this, the work will

consider typical requirements for platform/station spaces, boarding and alighting arrangements and

management of handling equipment and passengers on platforms. The project will also consider how to

ensure efficient loading and unloading to minimise impact on other station operations.
