NE050825MPAW

Description

Passive quantitative sampling methodology will be employed to allow the full picture of chemical exposure to wildlife to be assessed. Chemical analysis would be selective to chemicals most relevant to remain cost effective.

Based on the above analysis, evidence of exposure above the regulatory acceptable concentrations (RAC) for each substance can be used to assess the potential for adverse effects on aquatic species. Furthermore, the additive or synergistic adverse effects of chemical mixtures can be assessed.

Use of eDNA sampling methodologies is now well established and validated. eDNA data can demonstrate the ecological status of freshwater ponds and wetlands. Amphibia and aquatic invertebrate eDNA data will be used to assess effects of chemical contaminants in

the protected aquatic habitats surveyed.

The evidence of effects from biomonitoring data collected and the risk assessment evidence may allow direct management practices to mitigate the adverse effects of these chemicals, either at source, in wastewater treatment works or at the protected site.

This work is designed to feed directly into the effects of chemicals on D4/D5 indicator species conducted by DEFRA Pressures.

Contract 1

Supplier

- ENVIRESEARCH LIMITED

Contract value

- £20,000 excluding VAT
- £25,000 including VAT

Below the relevant threshold

Date signed

7 October 2025

Contract dates

- 7 October 2025 to 13 March 2026
- 5 months, 7 days

Main procurement category

Services

CPV classifications

- 73000000 - Research and development services and related consultancy services

Contract locations

- UK - United Kingdom

Procedure

Procedure type

Below threshold - open competition

Supplier

ENVIRESEARCH LIMITED

- Companies House: 04292592

- Public Procurement Organisation Number: PNTM-4625-HVHJ

Spring Lodge 172 Chester Road
