### **Scope**

#### **Description**

An Investigation into the Effects of the Tertiary Recycling Process on the Quality and Safety of Plastics

The Plastic Packaging Tax (PPT), introduced in the UK in 2022, aims to reduce plastic waste by promoting the use of recycled materials in plastic packaging. However, pharmaceutical primary packaging remains comprised of solely virgin (newly produced) materials. This is because the use of recycled plastics in primary packaging is largely prohibitive, due to concerns that degradation products will be present in the recycled plastic.

While the industry is aware that degradation products exist, these have never been fully investigated. The VMD is launching this call for interest to undertake research to identify and quantify the degradation products that occur during the tertiary recycling procedure and evaluate the potential for the use of recycled materials in veterinary pharmaceutical primary packaging.
