PRO004990

Description

The primary objectives of this project are to achieve optimal centrifuge operations through effective start-up, monitoring, maintenance, and shutdown procedures. Personnel will be required to adjust operational parameters in line with process requirements and perform lubrication, oil and grease replenishment tasks according to the manufacturer's specifications. The project is structured around key phases, including centrifuge operations, routine maintenance, and site support. This involves handling materials and shunting equipment with telehandler operations. The Supplier is expected to meet performance standards that emphasize zero safety incidents, timely fault reporting, and adherence to maintenance schedules. Personnel requirements include mandatory licenses for telehandler and shunter operations, along with certifications such as NPORS (National Plant Operations Registration Scheme) or equivalent, AITT (Association of Industrial Truck Trainers) and CPC (Driver Certificate of Professional Competence).

Additionally, all personnel must undergo occupational health assessments for working at height, have manual handling training, and COSHH awareness. The Supplier is obligated to provide necessary personal protective equipment (PPE) and tools, ensure staff training and certification, and maintain compliance with UK water industry regulations and UU site-specific safety protocols. Performance standards are established to ensure zero safety incidents, timely fault reporting, and adherence to maintenance schedules. Key Performance Indicators (KPIs) include 100% fault reporting within one hour, 100% maintenance compliance, and zero health and safety breaches. Contractual terms cover service hours, on-call requirements, notice for resource changes, insurance and liability coverage, and compliance with environmental and sustainability standards.

Competitive flexible procedure description

The appointed providers will provide trained and competent personnel to operate and maintain centrifuge systems at a number of UU sites. Operators will also support site operations, ensure compliance with health and safety standards, and perform routine maintenance tasks. The primary objective of this procurement is to secure resources who can support with achieving optimal centrifuge operations through effective start up, monitoring and shutdown procedures. The personnel will be required to adjust operational

parameters in line with process requirements and provide ongoing maintenance in line with manufacturer specifications. We intend to procure this required via MerCell EUSupply as a Competitive Flexible Procedure with an initial contract term of 3 years, and including discretionary and optional extension periods for up to a further 5 years.
