Description

The Combined Authority already has in place a single supplier framework for the provision, installation and maintenance of multi modal traffic sensors across the Liverpool City Region which will come to an end in June 2026 and there is therefore a need to re-tender a suitable framework to continue to expand the sensor network across the LCR. Being able to evidence the return on investment for transport funding is a key requirement and it is now recognised that the data obtained from the sensors is now part a core dataset for multiple purposes across the LCR. The LCRCA is conducting market engagement in order to better understand what is currently available on the market in relation to providing a service for the purchase, installation, maintenance (and repair/replacement of the same if required) and data licensing and hosting requirements of AI multi modal traffic counters/sensors and a data platform to access the data from the counters/sensors. This will allow the LCRCA to improve its data which will enable us to

justify, monitor and evaluate improvements we make to the transport network.
