

Salford University – DIT Data Centre UPS's Maintenance Contract Renewal

Description

Salford DIT have two Data Centres on site that provide IT services to the University both Data Centres are protected by a UPS and a generator in case of any site power failures.

The UPS's (Uninterrupted Power Supply) provides battery backup power to the Data Centres in the event of a power failure.

In the event that the UPS fails all power will be lost to the Data Centre with the loss of critical IT services.

Current Provider

The current support vendor known as Insight use a 3rd party vendor known as On365. On365 originally installed both of the UPS's and have supported them since. They know the UPS's and the Data Centres well and understand the complex power wiring.

The current contact has now ended, and we need to renew as the UPS's are critical in supporting the Data Centre and the university's IT systems.

UPS Details

UPS 1 – Schneider Electric

UPS - GVSUPS100KRHS - ID2122005843

Battery Frame - LIBSESMG16IEC - 9D2051G00118

UPS 2 – – Schneider Electric

UPS - GVSUPS50K0B5H - QD2305180005

Battery Frame - GVSMODBC9 - QD2250180312

Battery Frame - GVSMODBC9 - QD2238180219
